- What challenges do prospective users feel they will face with an ELN project?
- Are there concerns over user acceptance of an ELN?
- ELN integration - what systems are most likely to be interfaced?
- What is the extent of ELN knowledge and how does it compare to LIMS?
- What motivates prospects to purchase?
- Brand perception of ELN players. Who has customer mind share and who doesn't?

The market for Electronic Laboratory Notebook (ELN) technology is exploding. One of the fastest growing markets in scientific informatics, ELN has the potential to radically improve the effectiveness of laboratories.

Paper notebooks have been used for centuries to record experiments, data and conclusions. A poor communicator, paper notebooks inhibit knowledge sharing and collaboration. An ELN can create virtual teams of scientists that freely share their knowledge and experiences.

The **2008 ELN Survey** is a look at the attitudes, buying patterns, and opinions of existing and prospective ELN users. 527 laboratory and IT professionals and managers share their perspectives, viewpoints and thoughts on ELN. Expert commentary and analysis is provided and 131 charts and tables summarize data.
